Excerpt from Computation of the Equilibrium of a Plasma With Helical Symmetry Magnetohydrodynamics is one of the models used in plasma physics for describing the behavior of an ionized gas, or plasma, contained by a magnetic field. It is quite useful, since it combines reasonable physical accuracy With mathematical Simplicity. In the magnetohydrodynamic approach, the plasma is considered to be a classical macroscopic conducting fluid, characterized by its density  $\rho$ , its entropy  $S$  and its flow velocity  $u$ . The pressure  $p$  is then a function of  $\rho$  and  $S$ . The magnetic field  $B$  and the current  $J$  which interact with this plasma exert a Lorentz force  $j \times B$ .
