## Solar Powered Portable Charger for Disaster Recovery

By Abu Bakar, Rashidah / Gunawan, Teddy Surya

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Design and Development using Mini Solar Panel and Arduino Microcontroller | This book presents the development of solar powered portable charger to charge mobile phone during disaster recovery. It emphasizes on efficient solar energy harvesting circuit for charging mobile phone battery with the utilization of intermediate battery. In this book, Sealed Lead-Acid (SLA) battery was chosen as intermediate battery to protect the Lithium Ion battery which seems very sensitive to overcharging and discharging. Concerning on delivering the most efficient portable charger, polycrystalline silicon solar panel was selected which may supply up to 400mW of average power. In addition, Pulse Width Modulation (PWM) charging method was employed using Arduino microcontroller. During disaster, main power supply will be interrupted. If only the victims can communicate through their mobile phone, there will be high chance that they can be rescued by the rescue team. Note that, the portable cell tower can be set up by the relevant authorities during disaster. This book can benefit government, NGO, or volunteers during disaster, as well as many people in disaster prone area. | Format: Paperback | Language/Sprache: english | 104 pp.

### Reviews

*Very helpful to any or all category of men and women. It is definitely simplified but unexpected situations within the 50 % of your publication. I am very easily could possibly get a pleasure of reading a composed ebook.*

-- **Dr. Therese Hartmann Sr.**

*The ideal pdf i at any time read. I am quite late in start reading this one, but better then never. You will like the way the author create this book.*
